Participate in the Infant Learning Project at UT Dallas and help us learn how babies develop language learning skills. This study aims to understand if infants can recognize the difference between baby talk and adult talk and if both auditory and visual components are needed to differentiate the two types of speech.

This study is open to 4-, 5-, and 7-month-old infants. Visit [this link](https://lookit.mit.edu/studies/ef8f23fc-43f1-4ae0-9964-932bbc332e24/) for more information. Contact the Infant Learning Project at infantlearningproject@utdallas.edu.
